

## HOW TO APPLY MINERAL MAKEUP

**The key to applying Natural Qualities Mineral Makeup** lies in **BUFFING**. You don't brush it on; you buff the minerals into your skin. It blends into your skin so perfectly that it creates the illusion of a flawless, radiant complexion!

Poke holes in the covering over the sifter or peel off. Put the lid back on and shake several times. Remove lid and turn upside down. Take your kabuki brush and dip it into the minerals, then move the brush to the lid which has been turned upside down. Swirl around; really push the brush into the bottom of the lid so the minerals are deep into the brush. You should be working with about a dime size of minerals. This is concentrated mineral pigment and will go a long way! Turn the kabuki on end and tap the bottom of the brush hard so that all minerals settle into the brush. Now apply brush to your face and start buffing in a circular motion, concentrating on the downward strokes. Don't lift the brush off your face until you have covered your entire face, go over eye sockets and get into the corners by the nose without lifting the brush. Don't stop to re dip the brush – keep buffing until your entire face is finished. Now take a look! Dip the brush again, repeat the process if needed. It may take a day or two to be completely comfortable with applying the loose minerals but it is well worth it. You can have the look you've always dreamed of - a flawless and smooth looking complexion!
